In line with this policy, this program will continue research on the nutritional value and biosafety of cruciferous vegetables, which include broccoli, cabbage, kale, and brussel sprouts.Amine compounds and their derivatives have been used as various types of drugs for the treatment of various diseases such as, for example, antifatigue agents, neuromuscular blocking agents, blood

circulation improvers, antiallergic agents, anticoagulants, antithrombotics, antihypertensives, antihyperlipidemics, antipyretics, analgesics, antibiotic agents, antimycotics, and hormones. Recently, these compounds have also been studied for the treatment of autoimmune diseases such as diabetes and allergies, and the prevention of cancer. Antineoplastic agents represented by cytotoxic antibiotics have been clinically used for the treatment of solid tumors. However, these agents have some problems such as the side effect including bone marrow depression that impairs the induction of platelets, and liver function disorder that results in immunosuppression or leukopenia.
